PROFESSIONAL SUMMARY

Full-Stack Software Developer with nearly 3 years building enterprise ERP, POS, HR, and financial systems — 10+ now running in production across wholesale distribution, retail, corporate finance, and HR. I enjoy owning a module end to end, from requirements and architecture through deployment and live support, across both backend and frontend. I'm always eager to learn new tech stacks that fit the business need, and I care most about turning manual, error-prone processes into systems people can actually rely on.

WORK EXPERIENCE

CHIP MONG GROUP — Full-Stack Developer, IT Innovation & Strategy
Sep 2025 – Present | Phnom Penh, Cambodia

- CMG Retail ERP:** Led development of the Retail ERP module (Sales Orders, Deliveries, Invoicing), from requirements to live support — moving 100+ daily operational staff off paper-based ordering onto a single digital workflow.
- Performance Management (CMG PM):** Developing the CMG PM module, built to replace SuccessFactors for KPI cycles and IDP — giving the company its own long-term performance management system.
- MAR (Mission, Advance & Reimbursement):** Helped develop the Mission and Reimbursement modules, building the SAP-integrated claim submission and approval flow — replacing manual claim routing for 1,000+ employees with a digital process that posts straight to SAP.
- Safety System:** Enhancing the Safety TPM system, re-architecting reporting into real-time dashboards — giving 400+ managers instant visibility into compliance status.
- HR Operations Systems:** Support and maintain Meal Allowance, Overtime, Recruitment Management System, Shift Management, and Fingerprint Smart — keeping day-to-day HR operations running for 500+ staff across the group.
- AI Tooling Evaluation:** Selected to lead the company-wide evaluation of Claude AI tooling, defining how engineering adopts AI to accelerate internal development workflows.
- Cross-Functional Collaboration:** Work directly with business leads in daily Agile/Scrum standups, translating operational and integration requirements into shipped, supported features.

CENTRIC KERNEL POS — Software Developer
Oct 2023 – Sep 2025 | Phnom Penh, Cambodia

- POS & Retail Engine:** Developed and optimized the core transaction path — complex pricing models, promotional engines (Combo Deals), product inventory, and customer reporting — powering daily sales for the product's retail client base.
- Inventory & Warranty Tracking:** Engineered serial-number and batch tracking — giving retail clients unit-level traceability for warranty validation and targeted product recalls.
- Configurable Reporting:** Designed a template-driven invoice and sales analytics layer — letting client admin teams build their own operational reports without engineering involvement.
- Production Support:** Diagnosed and resolved complex issues in live retail environments, supporting clients from initial launch through ongoing maintenance.

BUSINESS DOMAIN EXPERTISE

HR & Allowance Systems | Financial Claims & Expense Approvals (SAP Integration) | Sales & Wholesale Distribution | Retail POS & Inventory | Safety & Compliance Tracking
